EDUCATION

University of Toronto

Bachelor of Science in Computer Science and Technology, Coding & Society

Toronto, Ontario Canada

Sep. 2022 – Present

EXPERIENCE

AI Engineer

Global Heath Core inc.

Jan. 2025 – April 2025

Toronto, Ontario

- Built a **KDTree** to find the closest medical facility in **O(log n)** time, reducing search times by **6,700%**.
- Crafted a **Django API** that compared Canadian health clinics stored on a **NoSQL Database** and returned a list of 3 clinics based off distance, ability to treat patient and wait time.
- Perform **end to end tests** and **unit tests** to assure proper functionality, on desktop and mobile.

MCSS (Math & Computational Sciences Society)

Administrative Exec. & Events Director

Sep. 2023 – Present

University of Toronto

- Organized workshops, events, and Deerhacks (A **UofT** hackathon with **300+ students** attending.)
- Ran workshops covering **Web Design, React, Deployment, GitHub** and more.
- Managed a team of 9 holding **weekly meetings** and one-on-ones as needed.

PROJECTS

Vamsi (1st place EmberHacks 2025) | *JavaScript, Gemini, ElevenLabs*

- Created a VS Code extension which uses an **LLM** to give students prompts on how to solve coding problems.
- Used **ElevenLabs** text2speech to read Gemini's advice.
- Created a **webservice** which collects issues detected by Gemini and summarizes them for a professor.

Stock Charity | *Django, REST API, React, Jest, TypeScript, SQL, Node.js*

- Created a **mobile responsive interactive front-end** using **React, TypeScript** and **Tailwind** that called custom **REST APIs** to display user information.
- Created **unit tests** and conducted **end-to-end testing** to assure all code worked as intended.
- Created a **dynamic data base** using **SQLite** to hold **user data**.

The Great Adventure | *Java, GitLab, GUI, CSS*

- Used **Agile** software development as the **project manager** and held **weekly meetings**.
- Made use of **JavaFX** to create a vibrant and fully interactive user experience.
- Used **OOP** to create responsive backend and **controller logic** in Java.

Custom Shell | *C, Command Line, Makefiles, Linux*

- Created a Custom Shell in **C** for **Linux** systems that performs commands, can **redirect input/output** and assign variables.
- Used **Makefiles** to **conditionally compile** the program to **optimize compilation**.
- Created a **token system** to convert user input into C functions to be executed.

TECHNICAL SKILLS

Languages: Python, Django, JavaScript, HTML/CSS, TypeScript, Java, C/C++, SQL, RISK-V, Kotlin

Libraries: PyTest, NumPy, Matplotlib, Jest, Tailwind, JavaFX

Developer Tools: GitHub Actions, Jira, Rest API, React, Gemini, LaTeX, Figma, Git, Linux, Unix
